

State-Driven Fitness App with Kotlin & Jetpack Compose

Project Title	Fitness App (Building a State-Driven Fitness App with Kotlin & Jetpack Compose)
Authors	Arsenii Marchenko , Min S Ko
Core Technology	Kotlin, Jetpack Compose, Material 3 Theming
Core Architecture	Unidirectional Data Flow (UDF) centered around the FitnessAppRoot Composable ⁷⁷ .

Key App Features

The app is designed to help users plan, customize, and track their strength training workouts.

Workout Day Management

- **Custom Days:** You can **add** new workout days with a custom name.
- **Edit/Delete:** You can **rename** an existing workout day by tapping "Edit" or permanently **delete** it.
- **Navigation:** Tapping a workout day lets you view the list of exercises planned for that day.

Exercise Customization

- **Define Exercises:** Within each workout day, you can **add** new exercises, including the exercise name, the number of Sets, and the number of Reps.
- **Edit Details:** Users can **edit** existing exercises to customize the Reps and Sets.

Tracking and Usability

- **Track Sets:** For each exercise, you can mark your completed **Sets** using simple checkboxes to track your progress.
- **Dark/Light Mode:** The app includes a switch to instantly change the theme between Dark and Light modes for better viewing
